Quality Plumbing That You
Can Depend On.*

The Advantages of a FlowGuard Gold® Plumbing System Are Clear...

Energy Efficiency

A FlowGuard Gold® water distribution system is more energy-efficient than a metal plumbing system. Superior heat retention saves money on hot water heating costs.

Reduced Condensation

FlowGuard Gold® pipe and fittings virtually eliminate condensation. The system significantly reduces the risk of costly drip damage to your walls, structure and contents.

Quiet Operation

A FlowGuard Gold® water distribution system is four times quieter than any copper plumbing system. The system provides quieter water flow and virtually eliminates the “banging” from water hammer.

Maintained Water Quality

Studies show that copper can leach into the water supply from metal pipes. Homeowners who use FlowGuard Gold® pipe and fittings never have to worry about plumbing system contamination affecting their drinking water.

Corrosion and Scale Resistance

FlowGuard Gold® pipe and fittings never corrode, pit or scale like metal pipes. No scale build-up means no water pressure loss and reduced maintenance.

Increased Reliability

A FlowGuard Gold® plumbing system is the most dependable, proven system available today. More durable than metal, it results in reduced maintenance and fewer repairs.

Look For the Gold

With a proven track record in homes, condominiums, apartments and hotels worldwide, a FlowGuard Gold® plumbing system is the superior choice for millions of satisfied homeowners.

So why settle for metal pipe? The advantages of a FlowGuard Gold® water distribution system are clear. Insist on the superior quality of pure gold. FlowGuard Gold® pipe and fittings.
